EXECUTIVE SUMMARY

On behalf of the City of Bristol, Virginia (City), SCS Engineers has prepared this report to the Virginia Department of Environmental Quality (VDEQ) outlining steps taken towards the action items outlined in the Plan of Action submitted to VDEQ on July 6, 2022. This report covers the Solid Waste Permit #498 landfill during the month of October.

1.0 LEACHATE PUMP STATION

The City has begun the process of repairing the pumps and addressing other concerns related to the leachate pump station. The steps taken by the City are outlined in the following sections.

1.1 FLOATING MATERIAL

On July 6, 2022 SCS received the results of samples taken from the Solid Waste Permit 498 Wet Well on May 25, 2022. Based on SCS' review of the data, the data indicates the liquid is non-hazardous. A letter submitted to the City on July 7, 2022 with SCS' review of the data and the underlying lab analysis is included in Appendix A.

The material substance that was previously identified in the tank is no longer present in the tank. SCS and the City understand that as liquids were pumped out of the tank, the material dissipated and was discharged after being diluted and mixed with other landfill liquids. Figure 1 shows a photo taken of liquids in the pump station tank on October 20, 2022. As can be seen in the photo, no floating material is present.

Figure 1. Photo of 498 Leachate Pump Station Tank Taken on October 20, 2022

1.2 PUMP REPLACEMENT

After receiving and reviewing the results of the samples, the City contracted with Buchanan Pump Service to complete the repairs to the pumps and infrastructure at the 498 wet well. Buchanan has ordered the necessary materials to complete the repair and will commence work when the materials arrive.

1.3 ALARM/NOTIFICATION SYSTEM

The City's Information technology department has begun the process of reviewing the alarm system. They have identified the materials necessary to repair the system and restore functionality.

2.0 COVER INTEGRITY AND EXPOSED WASTES

Outlined in the sections below are the steps taken by the City to address cover integrity and exposed wastes.

2.1 INTERMEDIATE COVER

The City has been hauling soil to the landfill to install a 12-inch thick intermediate cover across the entire landfill. The cover is being placed in accordance with 9VAC20-81-140(B)(1)(d). These activities are anticipated to continue throughout the month of November with coverage complete by the end of the month.

2.2 SURFACE EMISSIONS MONITORING

On October 12, 2022, SCS performed surface emissions monitoring on the landfill. The monitoring was performed in accordance with the site-specific GCCS Design Plan, the facility's Title V Permit, the requirements of 40 CFR 63.1960(c) and (d), 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route included all applicable areas of the Permit No. 498 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint.

VDEQ was copied on a letter outlining the results on October 28, 2022. A copy of that submittal is included in Appendix B. Table 1 summarizes the results of the monitoring event.

Table 1. Summary of October Surface Emissions Monitoring

Description	October 12, 2022
Number of Points Sampled	69
Number of Points in Serpentine Route	66
Number of Points at Surface Cover Penetrations	3

Description	October 12, 2022
Number of Exceedances	0
Number of Serpentine Exceedances	0
Number of Pipe Penetration Exceedances	0

3.0 GAS COLLECTION

At this time, the existing gas collection wells are not under vacuum due to damage to the landfill gas collection and control system (GCCS) infrastructure. SCS began the process of repairing the GCCS during the month of October. SCS replaced a butterfly valve and began to excavate the 6 in landfill gas header in order to determine the extents of damage to the GCCS. Investigation and repairs to the system are ongoing. No monitoring of the GCCS could be conducted this month because the system was not in operation. Figure 2 shows excavation activities conducted during the month of October in an attempt to identify damage to the landfill GCCS.

Figure 2. Photo of Troubleshooting Activities on SWP 498 GCCS

4.0 GRADING, GEOMETRIC CONFIGURATION AND GAS EXPASION

The City through SCS contracted with NV5 (formerly Quantum Spatial) to collect topographic data of the entire landfill property using aerial Light Detection and Ranging (Lidar). On October 7, 2022 the flight was completed and the topographic data collected. This data will be compared to the proposed final grading in the Solid Waste Permit drawings. SCS is in the process of reviewing this data and permit documents in order to prepare a design approach for the City to review.

5.0 LEACHATE SEEP AND PONDING

The City initiated a process of tracking precipitation events that exceed 0.25 inches using the on-site weather station. After each such event, City personnel will inspect the landfill for ponding and leachate seeps. Locations of ponding and seeps will be marked in the field. There have been no events exceeding 0.25 inches of precipitation since the City began keeping track of such event.

6.0 STORM WATER DRAINAGE AND MANAGEMENT

As discussed in Section 4, topographic data was collected of the landfill surface. This data will be used to estimate stormwater flow rates and determine methods for managing stormwater.

7.0 SELF-INSPECTION AND RECORDKEEPING

SCS has begun the process of preparing self-inspection log templates for the City to use during inspections. SCS is also preparing materials to conduct training of City staff who will be performing inspections. SCS intends to provide the forms and training to landfill staff during the month of November.

Appendix A

498 Leachate Pump Station Monitoring Summary

July 7, 2022
File No. 02218208.05, Task 6

via Email

Mr. Michael L. Martin
Solid Waste Administrator
City of Bristol Virginia
2103 Shakesville Road
Bristol, Virginia 24201

Subject: Bristol Integrated Solid Waste Management Facility
City of Bristol Closed Sanitary Landfill, Solid Waste Permit #498
498 Leachate Pump Station

Dear Mr. Martin:

SCS Engineers (SCS) is providing the following documentation regarding the collection and laboratory analysis of liquid samples from the 498 Leachate Pump Station. In response to the City's and the Virginia Department of Environmental Quality's concerns of the chemical make-up of the liquids within the 498 Leachate Pump Station, SCS collected samples of the liquid and free product layer on May 25, 2022 for analysis to assess if the samples are exhibiting hazardous waste characteristics.

The samples were collected by lowering a clean bucket into the Pump Station. A hole was made within the bottom portion of the bucket to sample the liquid layer (see **Exhibit 1**). The free product layer was sampled once the liquid layer was removed from the bucket

The samples were collected in laboratory-provided sampling containers and were stored in a clean, iced cooler for delivery to the laboratory. A chain-of-custody (COC) form was maintained and submitted with the samples to the laboratory to document sample custody. Upon receipt at the laboratory, the sample containers were inspected for integrity and consistency with the information entered on the chain-of-custody form.

The samples were delivered to Enthelpy Analytical in Richmond, Virginia for analysis to assess if the samples are exhibiting hazardous waste characteristics. The complete certificates of analysis (COAs), including chain-of-custody documentation, sample preservation logs, sample conditions checklists, and the laboratories' Virginia Environmental Laboratory Accreditation Program certifications, are attached. The liquid layer results are reported on COA 22E1462 and the product layer results are reported on COA 22E1464.

Exhibit 1. Sample Collection Method

According to Code of Federal Regulations (CFR), Title 40, Chapter I, Subchapter I, Part 261, Subpart C, §261.20 (a), "A solid waste, as defined in" 40 CFR 261.2, "which is not excluded from regulation as a hazardous waste under" 40 CFR 261.4 (b), "is a hazardous waste if it exhibits any of the characteristics identified" below:

- **Corrosivity** (40 CFR 261.22 (a) (1)) – It is aqueous and has a pH less than or equal to 2 s.u. or greater than or equal to 12.5 s.u., as determined by a pH meter using Method 9040C in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846.
- **Ignitability** (40 CFR 261.21 (a) (2)) - It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
- **Reactivity** (40 CFR 261.23 (a) (5)) – It is a cyanide or sulfide bearing waste, which, when exposed to pH conditions between 2 s.u. and 12.5 s.u., can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- **Toxicity** (40 CFR 261.24 (a)) – It contains a toxicity characteristic parameter concentration greater than the corresponding Regulatory Level listed on Table 1 of 40 CFR 261.24.

The May 2022 lab results for the 498 Pump Station samples were evaluated in accordance with the above criteria to assess the hazardous waste characteristic potential of the liquid and free product. Based on the below evaluation results, the samples did not exhibit hazardous waste characteristics.

- **Corrosivity**– Each sample was determined to be not corrosive.
- **Reactivity** – No cyanide or sulfide were detected in the samples. Therefore, the reactivity assessment does not apply.
- **Ignitability** – Each sample was a liquid; thus, the ignitability assessment does not apply.
- **Toxicity** – Each constituent listed on Table 1 of 40 CFR 261.24 were either not detected or detected at a concentration below the corresponding Regulatory Level listed on Table 1 of 40 CFR 261.24.

Mr. Michael Martin

Purchase Order:

Submitted To: Jennifer Robb

Client Site I.D.: City of Bristol

Enclosed are the results of analyses for samples received by the laboratory on 05/27/2022 16:30. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars
Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

Date Issued: 7/6/2022 6:58:05AM

Qualifiers and Definitions

DS Surrogate concentration reflects a dilution factor.

J The reported result is an estimated value.

L LCS recovery is outside of established acceptance limits

M Matrix spike recovery is outside established acceptance limits

M2 Sample was diluted due to matrix interference.

NonCorr NonCorrosive

P Duplicate analysis does not meet the acceptance criteria for precision

RPD Relative Percent Difference

Qual Qualifiers

-RE Denotes sample was re-analyzed

LOD Limit of Detection

BLOD Below Limit of Detection

LOQ Limit of Quantitation

DF Dilution Factor

TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Laboratory Order ID: 22E1462

Sample Conditions Checklist

Samples Received at:	3.00°C
How were samples received?	Logistics Courier
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

Dear SARAH ENDSLEY

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, May 31, 2022. The signature below certifies that the results are based on the referenced methods and applicable certifications or accreditations are noted for each parameter reported (see key at end of report).

Unless otherwise specified all analyses of solid materials are based on dry weight.

Reported results relate only to the items tested, as received by the laboratory.

On-site analysis (analysis ASAP) is recommended for the following tests: pH, temperature, dissolved oxygen, residual chlorine and sulfite. When performed off-site, these tests do not meet NELAC standards.

Abbreviations:ug/L = micrograms per Liter, mg/L = milligrams per Liter, ug/g = micrograms per gram, mg/kg = milligrams per kilogram ug/wp = micrograms per wipe, ug/ml = micrograms per millimeter, uS/cm = microsiemens per centimeter at 25 degrees Celcius ppb = parts per billion, DF = Dilution Factor.

If you have any questions concerning this report, please feel free to call Client Services at 1-800-888-8061.

Sincerely,

Dawn Casto
Technical Director (or designee)

Enclosed are the results of analyses for samples received by the laboratory on 05/27/2022 16:30. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

Ted Soyars
Technical Director

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

Sample Conditions Checklist

Samples Received at:	3.00°C
How were samples received?	Logistics Courier
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	No
Are all volatile organic and TOX containers free of headspace?	NA
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	NA
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis.	Yes

*Chlorine check could not be performed on -01A: Leachate #2 due to color/opacity of sample. Jennifer Robb notified via email. MRS 05/31/22

Dear SARAH ENDSLEY

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, May 31, 2022. The signature below certifies that the results are based on the referenced methods and applicable certifications or accreditations are noted for each parameter reported (see key at end of report).

Unless otherwise specified all analyses of solid materials are based on dry weight.

Reported results relate only to the items tested, as received by the laboratory.

On-site analysis (analysis ASAP) is recommended for the following tests: pH, temperature, dissolved oxygen, residual chlorine and sulfite. When performed off-site, these tests do not meet NELAC standards.

Abbreviations:ug/L = micrograms per Liter, mg/L = milligrams per Liter, ug/g = micrograms per gram, mg/kg = milligrams per kilogram ug/wp = micrograms per wipe, ug/ml = micrograms per millimeter, uS/cm = microsiemens per centimeter at 25 degrees Celcius ppb = parts per billion, DF = Dilution Factor.

If you have any questions concerning this report, please feel free to call Client Services at 1-800-888-8061.

Sincerely,

Dawn Casto
Technical Director (or designee)

Third Quarter Surface Emissions Monitoring Event

October 28, 2022
File No. 02218208.04

Mr. Mike Martin
Solid Waste Administrator
City of Bristol Virginia
2125 Shakesville, Rd
Bristol, VA 2125

Subject: Third Quarter Surface Emissions Monitoring Event – October 12, 2022
Bristol Integrated Solid Waste Facility – Bristol, Virginia

Dear Mr. Martin:

SCS Engineers (SCS) is pleased to submit the results of the Third Quarter 2022 Surface Emissions Monitoring (SEM) event performed at the Bristol Integrated Solid Waste Facility located in Bristol, Virginia on October 12, 2022. Note that while this monitoring occurred in the fourth quarter, this is intended to be counted as the Third Quarter Event since one was not completed between July 1st and September 30th. A separate fourth quarter event will be completed prior to the end of the calendar year. The monitoring was performed in accordance with the site-specific GCCS Design Plan, the facility's Title V Permit, the requirements of 40 CFR 63.1960(c) and (d), 40 CFR 60.36f(c) and (d), and 40 CFR 60, Appendix A, Method 21. The landfill gas (LFG) collection system is required to operate such that the methane concentration is less than 500 ppm above background at the landfill surface.

The monitoring route included all applicable areas of the Permit No. 498 landfill. Sampling was conducted with a Thermo Scientific TVA-2020 Flame Ionization Detector (FID) at 30-meter intervals and where visual observations indicated the potential for elevated concentrations of LFG, such as distressed vegetation and surface cover cracks. In addition, in accordance with 40 CFR 63.1958(d)(ii)(2) and 40 CFR 60.34f(d), monitoring was conducted at all surface cover penetrations within the waste footprint. The approximate monitoring route and sampling locations are presented in the attached Drawing.

At the time of monitoring, all areas of the Permit No. 498 landfill footprint are subject to regulatory monitoring based on the regulatory time schedule stipulated in 40 CFR 63.1960(b) and 40 CFR 60.36f(b). This yields a total monitored landfill footprint of approximately 11.1 acres for this quarterly event. Therefore, the target number of sampling points to cover the appropriate portion of the landfill footprint, utilizing a 30-meter grid interval, is approximately 53 (4.75 points per acre).

During the Third Quarter 2022 SEM event, SCS sampled 69 points, including three surface cover penetrations. The recorded methane concentrations are presented in Exhibit 1. None of the 69 sampling locations demonstrated a methane concentration that exceeded the regulatory limit of 500 ppm above background. Therefore, no additional monitoring is required for this Third Quarter event.

SCS will notify the City of Bristol of the proposed schedule for the Fourth Quarter SEM event for 2022 (to be performed prior to December 31, 2022).

Mr. Mike Martin
