## **1.0 INTRODUCTION**

The City of Bristol, Virginia (City) prepared this report for the Virginia Department of Environmental Quality (VDEQ). This report covers the Solid Waste Permit (SWP) #221 Landfill during the month of March 2025.

The following sections outline actions completed towards the applicable items in Appendix B of the Consent Decree.

## **2.0 COVER INTEGRITY AND EXPOSED WASTES**

As outlined in Appendix B of the Consent Decree, cover integrity of the SWP #221 Landfill will be managed primarily through ongoing surface emissions monitoring in accordance with Federal and State regulations.

### **2.1 SURFACE EMISSIONS MONITORING**

On 12 December 2024, the City performed annual surface emissions monitoring (SEM) on the landfill. During the monitoring event no exceedances were detected on the serpentine route or at pipe penetrations. Details of the surface emissions monitoring were included in the December 2024 Monthly Compliance Report for the SWP No. 221 Landfill.

The 2025 Annual SEM Event will be performed later this year.

## **3.0 GAS COLLECTION**

The City took steps to optimize gas collection and minimize air intrusion as outlined in the sections below.

### **3.1 SYSTEM OPTIMIZATION**

There are currently 15 vertical extraction wells in the SWP #221 Landfill (Well Nos. 1 – 15). In waste disposal units where the age of the buried wastes is greater than 40 years, as is the case at SWP #221 Landfill, the rate and quantity of decomposition gas production declines significantly compared to the rate and quantity of LFG generated in more recently buried wastes. However, some of these devices will show normal methane ranges and are tuned accordingly. There is no historical evidence of elevated temperatures in the SWP #221 Landfill. Also, the #221 Landfill Area is not believed to be a significant source of fugitive LFG emissions or odors.

Each month, adjustments are made during routine wellfield monitoring to optimize applied vacuum (and thereby minimize emissions) on the SWP #221 wells. The average gas composition in the SWP #221 wells is shown in Table 1. Gas composition and a summary of adjustments made to individual wells are listed in Appendix A.

## 3.2 OPTIMIZATION PLAN AND REPORTING

### 3.2.1 Optimization Plan

On December 1, 2022, on behalf of the City, SCS submitted a plan that provides for means and methods for optimizing the performance of the existing gas extraction system in the Solid Waste Permit #221 landfill. Additional details about that plan were included along with a copy of the plan in the November 2022 Monthly Compliance Report for the SWP #221 Landfill.

### 3.2.2 Optimization Actions

During the month of January 2023 actions were taken to implement the submitted Optimization Plan. The actions taken at the SWP #221 Landfill in accordance with the Plan were summarized in the January 2023 Monthly Compliance Report for the SWP #221 Landfill. SCS prepared a report that

detailed the results of each of these activities and the report was submitted to VDEQ on February 1, 2023.

### **3.2.3 Monthly Wellhead Monitoring**

On 10 March 2025, the City performed monitoring of the landfill gas wells. The results of the monthly monitoring were submitted to VDEQ on 2 April 2025 and are included in Appendix A. The results of the monthly monitoring also include comments regarding observations and adjustments made by the field technician.
